## Summary

Android engineer with 2+ years of experience building production apps in Kotlin using MVVM. Progressed from feature development to owning architecture decisions and technical direction for the Android codebase at FareFirst, maintaining a 99.78% crash-free session rate for an app serving 500 users per half hour.

## Professional Experience

**FareFirst** — Mangaluru, Karnataka, India (On-site)

July 2024 – July 2026

**Software Engineer / Android Team Lead**

September 2025 – July 2026

- Rebuilt a legacy travel meta-search application (8 years in production, originally Java with callbacks and AsyncTask) from scratch into a 9-module Kotlin codebase covering flights, hotels, cars, taxi, and visas, each integrating multiple third-party providers.
- Designed a Remote Config-driven provider selection engine (rules by country, currency, app/system version, date-time) with concurrent provider polling via Coroutines, dynamic feature visibility, and static URL config.
- Owned architecture and technical-direction decisions for the Android codebase, evaluating trade-offs around network resilience, configuration management, and modularization.
- Diagnosed a regional outage via Firebase Crashlytics/Analytics (domain blocking/DNS non-propagation) and built an in-app DNS-over-HTTPS resolver with Remote Config-managed servers, OkHttp interceptors for request-level error handling, and sliding-window token verification (HTTP 200) before use.
- Maintained a 99.78% crash-free session rate in production (500 users every half hour), using Android Profiler and LeakCanary to catch memory issues and improve startup time.

**Android Developer**

July 2024 – September 2025

- Designed and built core Android application features within an existing MVVM codebase, focusing on state management with Kotlin Coroutines.
- Implemented dependency injection using Hilt and reactive data flows to support existing feature specifications, with a focus on debugging and fixing issues in the app's core flows.

## Technical Skills

**Core Languages:** Kotlin, Java

**Android & Mobile Architecture:** Android SDK, Android Jetpack, Jetpack Compose, XML/View-based UI, Clean Architecture, MVVM, ViewModel, StateFlow/Flow, Kotlin Coroutines, Dependency Injection (Hilt/Dagger), Multi-Modular Architecture

**Android Tools:** Android Studio, Gradle, Git, GitHub, Postman, Firebase, Firebase Remote Config, Firebase Crashlytics, Play Store Release Management

**APIs & Integrations:** REST APIs, Retrofit/OkHttp, OkHttp Interceptors, API Error Handling, Serialization (Gson/kotlinx.serialization), JSON, Google Maps API, OTA Updates, Google Analytics, Room (Basic)

**Practices:** Debugging, Network/Image Caching, Server-Driven UI, Startup Time Optimization

## Education

**Polytechnic College, Karkala**

November 2022 – April 2024

Diploma in Computer Science and Engineering

**Sri Bhuvanendra College, Karkala**

July 2018 – July 2019

PUC, Computer Science

## Languages

English, Hindi, Kannada
